DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-18 and 21, drawn to a digital television receiver, classified in class 348, subclass 725.
 - II. Claims 19-20 and 22, drawn to controlling an antenna, classified in class 348, subclass 731.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as storing an effective poser of the channel signal received through the antenna in the memory by rotating the direction of the antenna and selecting an antenna pattern when a maximum signal power is detected and invention I has separate utility such as generating control signal corresponding to an optimal direction of the antenna by comparing the new state signal to the previous state signals. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
